2011-2012 H.S.E. Team

- Quantavious Griggs
- Amber Chinn
- Kentrell Clark
- Austin Williams
- James Mckinnon
This year the team established that we are doing a continuation of the previous years’ project. We have agreed that our entire project will be centered around developing aquaponics and hydroponics systems, as well as agricultural classes centered on aquaponics and hydroponics, and the produce from our systems will be available for purchase at the agricultural sessions.

As of today, we are choosing which crops to harvest this year. We are also developing sketches for aquaponics and hydroponics systems. These sketches will be used for the development of commercial aquaponics and hydroponics systems that we will be selling.

This year, we came across the idea to purchase a shipping container in order to create large scale aquaponics and hydroponics systems. We intend to evaluate this idea more but for now it’s an idea.
