CASS TECHNICAL HIGH SCHOOL

2011-2012 HSE TEAM - INNOVATING YOUNG MINDS (IYM)

Our project goal is to introduce the power of the sun and how its heat and light can be harnessed to make energy. Educational project-based learning comic books will be designed to educate elementary school aged students. We will demonstrate how solar electrical power and renewable energy provide clean energy in the world. We will also demonstrate this concept by incorporating technology with the creation of a video game and an electronic form/animated cartoon of the comic book.
